ABSTRACT

1

2   A reporting program and system for updating a master copy of a geographic

3   database is disclosed. According to the method and system, reports are obtained that

4   relate to data contained in a geographic database. Satellite images of the geographic

5   locations represented by the data in the reports are obtained. The satellite images are

6   analyzed to confirm a need to make changes to the master copy of the geographic

7   database based on the reports. After confirming the need to make the changes, the master

8   copy of the geographic database is updated.
